CRM Components, Flow and Business Logic

Sales Targets and Quadrant Targets

1. Number of devices is the base for target setting
2. For every 1 device target closure, there needs to be 4 Quadrant4 leads, 8 Quadrant3 leads, 16 Quadrant2 leads and 32 Quadrant1 leads as backup

Lead generation module

1. Collate relevant database for lead generation through calls, mails, campaigns etc
2. Assign specific Pomodoro's for calls, emails, campaigns etc
3. Fix number of call targets for the day, make calls
4. Record the calls on a calls register with all the call details, outcomes etc
5. Analyze calls made vs number of calls target, reports

Lead Qualification

1. Use the BANT qualification model for lead Qualification
2. B A & T carry 5 points for completeness of data
3. N carries 10 points for completeness of data

Lead Classification

1. If all BANT parameters are complete check for Timeline (expected closure date)
2. If closure is within 15 days, move Lead to Quadrant 4, if closure is beyond 15 days and within 25 days move lead to Quadrant 3, if closure is beyond 25 and within 40 days, move lead to Quadrant 2 and if closure is beyond 40 days and within 60 days, move lead to Q1. All closure dates beyond 60 days, keep in Nurturing
3. If leads stays in Q4 for more than 15 days, move it to Q3 and similarly for Q3 leads beyond 25 days, move it to Q2 and Q2 leads beyond 40 days, move to Q1 and Q1 leads beyond 60 days, move to nurturing

KRA Tracker, Call Tracker & other MIS reports

1. A call tracker for daily lead generation call target based on allocated pomodoro, the KRA tracker will also have quadrant movement targets where leads in various quadrants need to be moved towards closure
2. The actuals for daily calls against targets, the quadrant movement actual against targets etc would be recorded in the KRA
3. The call tracker would have the details of every call made, the BANT parameters obtained while calling, the BANT scores automatically assigned based on the BANT

parameters inputs, The Quadrant classification, based on the Closure time inputs during the call, the status of the call, the action points, next call date etc

4. MIS reports on the Sales person individual performance against sales targets, the quadrant targets etc along with the total team performance to be detailed.

Everyday activity by & data input by the salesperson

- Lead Generation calls based on call targets for leads and quadrant movements
- Call tracker update of the call details
- KRA sheet update at the end of the day from the call register as well as manual updates after every sales visit, follow up visit etc
- Backlogs for the day and plans to catch the next day.

CRM Project Scope of Work

Project Overview

This document outlines the scope of work for developing a comprehensive Customer Relationship Management (CRM) system focused on lead generation, qualification, classification, and performance tracking with a structured quadrant-based sales pipeline management approach.

Project Objectives

The CRM system will enable systematic lead management through a quadrant-based classification system, comprehensive tracking of sales activities, and detailed performance analytics to optimize sales team productivity and target achievement.

Functional Requirements

1. Sales Target Management Module

Target Setting Framework:

- Device-based target setting as the primary metric for sales goals
- Automated calculation of quadrant targets based on device targets with predefined ratios:
    - 1 Device Target = 4 Quadrant 4 leads
    - 1 Device Target = 8 Quadrant 3 leads
    - 1 Device Target = 16 Quadrant 2 leads
    - 1 Device Target = 32 Quadrant 1 leads
- Configuration panel for administrators to set and modify target ratios
- Individual and team target assignment capabilities
- Target tracking and progress monitoring dashboards

2. Lead Generation Module

Database Management:

- Centralized lead database with import/export capabilities
- Integration capabilities for external data sources
- Data cleansing and deduplication features
- Contact information management with comprehensive lead profiles

Activity Planning:

- Pomodoro technique integration for time management

- Specific time allocation for calls, emails, and campaigns
- Daily call target setting and assignment
- Campaign planning and execution tools

Call Management:

- Comprehensive call register with detailed logging capabilities
- Call outcome tracking and categorization
- Integration with telephony systems for automatic call logging
- Call recording and playback functionality (subject to compliance requirements)

Performance Analytics:

- Daily, weekly, and monthly call analysis reports
- Calls made vs. target achievement tracking
- Success rate analysis and trend identification
- Individual and team performance comparisons

3. Lead Qualification Module

BANT Qualification Framework:

- Budget (B) assessment with 5-point scoring system
- Authority (A) identification with 5-point scoring system
- Need (N) evaluation with 10-point scoring system
- Timeline (T) determination with 5-point scoring system
- Automated BANT score calculation (maximum 25 points)
- Qualification status indicators and progress tracking

Data Completeness Tracking:

- Real-time scoring based on BANT parameter completion
- Mandatory field validation for qualification progression
- Data quality indicators and improvement suggestions
- Automated reminders for incomplete qualifications

4. Lead Classification Module

Timeline-Based Quadrant System:

- Quadrant 4 (Q4): Closure within 15 days
- Quadrant 3 (Q3): Closure within 16-25 days
- Quadrant 2 (Q2): Closure within 26-40 days
- Quadrant 1 (Q1): Closure within 41-60 days

- Nurturing: Closure beyond 60 days

Automated Lead Movement:

- Time-based automatic quadrant transitions
- Q4 to Q3 movement after 15 days without closure
- Q3 to Q2 movement after 25 days without closure
- Q2 to Q1 movement after 40 days without closure
- Q1 to Nurturing movement after 60 days without closure
- Alert notifications for pending movements

Classification Logic:

- Complete BANT requirement validation before quadrant assignment
- Timeline-based automatic classification
- Manual override capabilities with approval workflows
- Classification history and audit trails

5. KRA Tracker and Call Management System

Daily Call Tracking:

- Pomodoro-based call target allocation
- Real-time call logging with comprehensive details
- BANT parameter capture during calls
- Automatic BANT scoring and quadrant classification
- Call status tracking and outcome recording
- Action point management and follow-up scheduling

KRA Performance Tracking:

- Daily call target vs. actual performance
- Quadrant movement target vs. actual achievement
- Individual performance metrics and scoring
- Team performance aggregation and analysis
- Goal achievement tracking and progress indicators

Call Register Features:

- Detailed call information capture
- Customer interaction history
- Call outcome categorization
- Next action planning and scheduling
- Follow-up reminder system

- Integration with calendar applications

6. MIS Reporting and Analytics

Individual Performance Reports:

- Sales target achievement analysis
- Quadrant target fulfillment tracking
- Call productivity metrics
- Lead conversion rate analysis
- Activity timeline and efficiency reports

Team Performance Dashboard:

- Aggregate team performance metrics
- Comparative analysis between team members
- Target achievement trends and forecasting
- Resource utilization and productivity insights
- Performance ranking and recognition features

Custom Report Builder:

- Configurable report parameters
- Multiple export formats (PDF, Excel, CSV)
- Scheduled report generation and distribution
- Interactive dashboard widgets
- Real-time data visualization

7. Daily Activity Management

Sales Person Dashboard:

- Daily call targets and progress tracking
- Quadrant movement targets and achievements
- Lead generation activity planning
- Call tracker integration and updates
- KRA sheet management and updates

Activity Logging:

- Call details capture and categorization
- Sales visit documentation
- Follow-up activity recording
- Manual KRA updates and annotations

- Backlog management and planning

Planning and Follow-up:

- Daily backlog identification and tracking
- Next-day activity planning
- Missed target recovery planning
- Priority task management
- Reminder and notification system

Technical Requirements

System Architecture

- Web-based application with responsive design
- Cloud-based deployment with scalability options
- Mobile application support for field sales activities
- Integration capabilities with existing business systems

Data Management

- Secure database with backup and recovery procedures
- Data encryption and privacy compliance
- User access control and permission management
- Audit trail and change tracking capabilities

Integration Requirements

- Telephony system integration for call logging
- Email system integration for communication tracking
- Calendar application synchronization
- Third-party data source integration capabilities

Deliverables

1. **Core CRM Application** with all specified modules and functionality
2. **Mobile Application** for field sales team usage
3. **Administrative Panel** for system configuration and user management
4. **Reporting Dashboard** with all specified MIS reports
5. **Integration Modules** for telephony and email systems
6. **User Training Materials** and documentation
7. **System Administration Guide** and technical documentation
8. **Data Migration Tools** for existing data import
